VITAL INFORMATION AVAILABLE WITHIN A MOMENT'S NOTICE
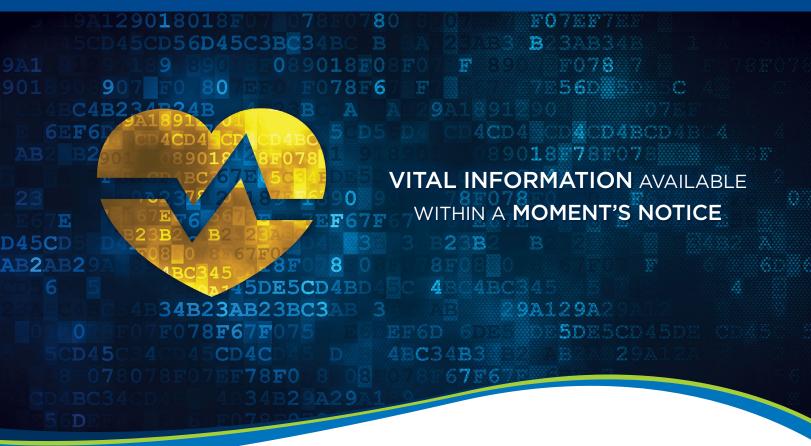

DTI - STREAMLINED WORK PROCESSES

A fundamental requirement in today's dynamic healthcare environment is to ensure that current and accurate patient and staff information is available to customers, vendors, healthcare providers, and regulatory agencies. Staff should have all of this information readily available within a moment's notice.

Healthcare organizations are seeking new technological avenues to make information available to different users simultaneously, provide significant cost savings, enhance the patient experience, improve physician services, meet regulatory requirements, protect against litigation, and eliminate wasted labor chasing lost or misplaced folders. **DIGITAL TECHNOLOGY INC.'S (DTI)** document management infrastructure can make that information available to all those who need access to it.

The benefits of the system focus on providing immediate access to the medical records, patient financial information, and any other related relevant information, as well as efficient processing of the information. In doing so, time reductions will be seen instantly within daily inquiry responses, as well as more flexible identification of pertinent information as part of the patient record. This same infrastructure can enhance control of healthcare mission-critical functions such as patient billing, collections, and Medicare compliance review support.

The system's detailed security and built-in transaction logs and document history reporting can help assist in meeting regulatory reporting compliance for HIPAA, HCFA, and collection histories.

Recognizing that return on investment is an important factor in any decision, DTI can lower your total cost of ownership while offering a solution that will provide the most dependable, mission-critical technology for your healthcare information needs. Additionally, DTI can be interfaced seamlessly with your CRM, ERP, or other e-business applications providing relevant, timely information to everyone upon request. Whether your organization was standardized on a traditional client/server platform or on thin web-client interfaces, DTI will help you meet your integrated information management needs and goals.

By choosing Digital Technology, Inc., you will find an organization that is committed to providing high quality service and product offerings, and most importantly, an organization that puts servicing the customer with integrity first. Our business philosophy is simple: Understand what the client needs; Match deliverables to the client's expectation; Give the customer consistent, honest, and reliable service at a fair and reasonable price that always fits into our customer's
