DTI - STREAMLINED WORK PROCESSES

DIGITAL TECHNOLOGY, INC., (DTI), is a provider of electronic document management solutions. DTI develops offerings that address an end user's electronic document management needs at the department and enterprise levels. DTI provides solutions that allow our customers to gain new efficiencies and maintain a competitive advantage in their respective industries. We are dedicated to providing document imaging solutions for any size business or organization. We provide organizations with electronic document management solutions that help them streamline their work processes and share information among their employees, business partners, and customers. The idea is not to reinvent business, but rather to streamline current business processes and improve operating efficiencies.

Our offerings have been presenting these same benefits to our customers for years by dynamically organizing and controlling the access and delivery of documents and by interactively managing the business processes in which these documents are used. By interfacing DTI with other mission-critical applications, and by deploying the entire system in a web environment, organizations can share the full spectrum of information with whoever needs it. Better information flow empowers employees to innovate and adapt in the face of change, and forges deeper relationships with customers and partners.

DTI offers an enterprise content management solution that combines the technologies of document imaging, COLD/ERM, and integrated document management into a single web-enabled application. Through a unique pricing model, DTI can supply a reduced paper office solution that organizes a multitude of documents into a single electronic storehouse. It provides extensive flexibility to index, locate and deliver any document to any PC at any time.

DTI also integrates print streams and scanned documents into a digital format to enable a search, access and display via a standard web browser. The system supports multiple indexes as well as the ability to link any document type to any given transaction from one common index. All of this is done with a zero resource impact implementation process.

Benefits:

- Non-proprietary system allows interfaces with almost any other system you may have
- Web based system allows access from any PC at any time based on individual secured rights
- Unlimited users – No more having to pay for multiple users to access your own documents!
- It provides extensive flexibility to index, locate, and deliver any document to any PC at any time
- Access information more easily
- Facilitate collaboration between departments
- Gain greater control of your information
- Streamline business processes

Recognizing that return on investment is an important factor in any decision, we can lower your total cost of ownership while offering a solution that will provide the most dependable, mission-critical technology for your information and service needs.

Our business philosophy is simple. Understand what the client needs. Match deliverables to the client's expectation. Give the customer consistent, honest and reliable service at a fair and reasonable price that always fits into our customer's business model.
